EnviroVET

Promoting and Tracking Environmental Sustainability in VET

The EnviroVET project supports the professional development of vocational education and training providers by increasing their environmental consciousness through a range of innovative project outputs, including an interactive tool designed to measure environmental impact in key areas within the vocational education and training sector.

The project involves European learners from vocational education and training institutions, vocational education and training policy makers and workplace learning providers. In addition, the EnviroVET consortium engages stakeholders to positively impact vocational education and training staff, and organizations to become agents of environmental change.

FOURTH TRANSNATIONAL PROJECT MEETING IN EGER, HUNGARY

The 29th of June 2023, the EnviroVET consortium met in Eger (Hungary) to further develop the project. The meeting was a crucial step on the road to ensure the success of EnviroVET during this last period of the project. During the meeting, we addressed several issues that are fundamental to the project, made progress in the creation of educational materials and reviewed some essential aspects of quality and dissemination.

One of the focal points of the meeting was the discussion of the results that are in the process of being created. This allowed attendees to assess the progress made and discuss how we should move forward on with the e-learning course. These materials will be essential to train VET professionals in skills related to sustainability and the environment, which will contribute significantly to the overall goal of EnviroVET.

the European Union

In addition, an exhaustive review of the quality and dissemination aspects of the project was also carried out. Furthermore, ensuring that the results are of high quality and that they are adequately promoted will help EnviroVET to be a successful project and fulfil its mission of fostering sustainable attitudes in VET centres. Therefore, these aspects are essential to achieve the objectives established in this last period of the project.

THE ENVIROVET FACILITATOR E-COURSE IN PROGRESS

The partners are currently working on finalizing the EnviroVET Facilitator eCourse, which will be a 30-hour e-course composed of 5 topics on green approach. This output will target professionals working in the VET sector, equipping them with the relevant skills and knowledge to become advocates of sustainability. In addition, this course will be available in the different languages of the consortium in a free and accessible way.

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

Co-funded by
the European Union

To this end, the consortium is creating the relevant modules for the eCourse, reflecting all the knowledge they have acquired during the implementation of the project and combining initiatives and learning strategies from their specific countries.

The course will eventually consist of the following topics:

1. General Policies
2. Infrastructure and Facilities
3. Vocational Education and Training
4. Teaching and Training Methodologies
5. Staff Continuous Training and Personal Development

Next steps:

In the coming months, a piloting session will be conducted in which students, teachers and VET centers will test the materials created as part of the Facilitator e-Course. This will allow us to make the relevant improvements and finalize the result, which will be available on the project platform in the different languages of the consortium.

Moreover, since we are in the final stage of the project and its end is approaching, the partners will soon hold the local Multiplier Events, where they will disseminate the project and its results. At these events, the consortium will promote the different outputs of the project, boosting the impact of the results and reaching more individuals of the target audience.

Finally, the partners are preparing for the last EnviroVET Transnational Project Meeting, which will take place on November 7 in Vilnius (Lithuania).
